Our company is an authorized reseller of both Rawafed Co. & GiGa Ltd. And we offer all kinds of packages available from a download speed starting from 4 Mega Bytes up to 20 Mega Bytes in addition to custom packages with higher speed available upon request. The quota shares of each packages varies from 15 GiGa bytes to an unlimited share of download.

Vsat internet Service

We offer and deliver secure and reliable Vsat internet into hard to reach places in the country's harshest environments. A leading service provider of VSAT satellite communications, the company combines intelligent outdoor wireless technology to design and build end-to-end multi-service networks over a single infrastructure.

New Era critically monitors every aspect of a network project – from preliminary site survey and scheme to on-going repairs and maintenance. Customers receive a single contract backed by a single service level agreement SLA from a single supplier.

We use the most reliable open source utilities for searching /processing satellite data from Eutelsat & Haylas with a wide variety of packages of limited and unlimited internet speed.

Services offered:

- Custom packages suitable to clients.
- Effective & delicate site surveys.
- Reliable products and tools.
- Complete A to Z installations.
- Ongoing maintenance and customer services.

Satellite networks

Terrestrial infrastructure facilities are extremely vulnerable to natural disasters. accidents, security issues or a downed telephone pole cannot possibly disrupt satellite communications. the number of opportunity for network outages are significantly reduced. Compared to terrestrial networks, there are much less opportunities for a network outage.

Due to difficulty in outer space repairs, the satellite space crafts are designed with multiple layers of redundancy and multiple backup systems. There are even spare satellites already in orbit which are immediately available in the unlikely case of a catastrophic failure of a satellite.

Other Services

New Era offers a huge variety of services linking multiple significantly designated sites all together with a prospect of co-location , co-management and co-existing in one virtual communicative channel. The services offered includes

DATA CENTER CO-LOCATION

Protected and cost-effective data center co-location services for you and your customers, your franchisee or any other subsidiary entity . Protect your servers and data in a secure and clean environment . The co-location service provides reliable, secure, high-speed connectivity and the freedom to manage your servers easily from a remote site.

VPN

Many companies require a secure connection for remote offices or telecommuters, and few standard VPN solutions will work well over a satellite connection. We've made the necessary adjustments and adaptations to maintain the highest level of VPN know-how in the broadband satellite Internet industry. You can offer both VPNs and Private IP networks at encryption levels that satisfy even the most security-conscious federal agencies.

VOIP

(Voice over Internet Protocol) permits you to make a telephone call over the Internet. VoIP is broadly accepted as a dependable and affordable means of voice. Using VoIP on the VSAT Systems satellite Internet network lets you enjoy the benefits of VoIP no matter where you're site is in Libya
